

SecureComms Catalunya SA

Tender: CTTI-2026-36

Subministrament, instal·lació i posada en producció d'equipaments de distribució de clau quàntica

Envelope: Sobre B — Technical Proposal (Judici de Valor)

Language: English (Prototype)

Status: Synthetic — for evaluation agent testing

SecureComms Catalunya SA is a leading provider of secure communications infrastructure with extensive experience in quantum networks and advanced cryptographic deployments. Our proven track record positions us as a trusted partner for CTTI in this strategic initiative.

1.1 PLA DE MIGRACIO — PROJECT TEAM

Our team for this engagement has been assembled to bring together the right combination of skills, certifications and quantum experience required to execute this contract successfully. All required roles are filled by qualified professionals from our permanent workforce. Our project manager has extensive experience leading technology projects. Our architects hold relevant industry certifications and bring deep understanding of network architecture.

1.2 EXECUCIO CRITICA I DESPLEGAMENT

Team for Execution Phase

Our network administration team comprises certified professionals with appropriate credentials for this type of deployment. They are supported by our broader technical organisation which maintains a pool of specialised resources available on demand throughout the project lifecycle.

Risk Identification

Risk 1 — Network connectivity disruption during installation: Probability medium. Impact: temporary disruption to operational services at affected nodes. Mitigation: standard change management procedures will be applied, with installation windows agreed with CTTI operations teams in advance of each site visit.

Risk 2 — Equipment delivery delays: Probability low to medium. Impact: potential delay to commissioning milestone. Mitigation: SecureComms Catalunya has contingency stock arrangements with our suppliers to mitigate the risk of delivery delays affecting the project timeline.

Service Monitoring Tool

SecureComms Catalunya will provide a monitoring dashboard that meets all required KPIs as defined in the PPT and PCAP evaluation criteria. The platform is updated regularly and provides both a global and granular view of the QKD infrastructure. Alert notifications will be generated for threshold breaches.

Documentation

Comprehensive documentation will be provided throughout all project phases, covering the full scope of the deployed systems and services.

Equipment — Flexibility

The equipment proposed is fully compliant with all applicable ETSI standards and exceeds the minimum performance requirements specified in Section 3.1.2 of the PPT. Emitter and receiver units are independently replaceable, in line with the flexibility requirements of the tender.

Equipment — Technical Specifications

The proposed system delivers superior key generation rates under the expected operating conditions of the CTTI topology. The KMS component incorporates industry-leading security features and meets all relevant compliance requirements for cryptographic modules.

Equipment — Robustness and Resilience

Redundancy features are incorporated to ensure high availability of the quantum key distribution service. Our equipment has been validated through appropriate certification processes and is widely deployed in comparable environments.

1.3 ANALISI DE LES DADES — DATA ANALYSIS TEAM

The data analysis team will be drawn from our analytics practice, which has supported previous projects involving network performance analysis. Our specialists will ensure the deliverables for this phase meet the requirements set out in the PPT.

1.4 PLA DE DEVOLUCIO DEL SERVEI

A full handover plan will be developed and executed in accordance with the contract requirements. The handover process will be designed to ensure continuity of service and to give the CTTI team the knowledge and resources needed to manage the infrastructure effectively following the conclusion of the contract. SecureComms Catalunya is committed to a smooth and professional handover experience for all stakeholders involved.

ADVISORY: This document is a synthetic technical proposal generated for evaluation agent testing purposes only. All company names, personnel, certifications, and project references are fictional.
