

PatrimoniSaaS Catalunya SL

Tender: CTTI-2026-5

Serveis de transformacio del sistema de documentacio i gestio de les col·leccions del Sistema de Museus de Catalunya

Envelope: Sobre B — Technical Proposal (Judici de Valor)

Language: English (Prototype)

Status: Synthetic — for evaluation agent testing

PatrimoniSaaS Catalunya SL presents this proposal for CTTI tender CTTI-2026-5. We are a provider of digital transformation solutions for cultural heritage institutions with experience across the Catalan museum sector. Our platform PatrimoniCloud is designed to meet the needs of public cultural institutions.

SOLUCIO TECNICA — PROPOSTA DE LA SOLUCIO

General Management and Documentation Functionalities

PatrimoniCloud provides comprehensive collections management functionality covering the full object lifecycle as required by the tender. Our platform supports cataloguing, provenance tracking, conservation management, location tracking, and exhibition management. The interface is available in Catalan as required. Our system complies with applicable museum documentation standards and meets the functional requirements set out in the PPT.

Transversal Functionalities

PatrimoniCloud supports multi-tenant deployment with configurable shared elements including thesaurus terms and classification hierarchies. Integration capabilities are provided through our API layer. Role-based access control is configurable per institution. Our platform is designed to interoperate with external cultural heritage catalogues and aggregators in accordance with applicable standards.

Digital Asset Management (DAM)

PatrimoniCloud includes digital asset management capabilities supporting image and document management linked to collection records. Assets are stored securely with EU data residency. Rights management functionality is included. Integration with the collections catalogue is provided through the platform's unified interface.

MODEL DE GOVERN, METODOLOGIA, PLANIFICACIO, MIGRACIO

Governance Model and Planning

Our implementation methodology follows an iterative approach covering configuration, migration, and go-live phases. The project will be managed by an experienced project manager supported by our technical implementation team. Governance meetings will be held at regular intervals to ensure alignment with CTTI requirements. A detailed project plan will be developed during the initial project setup phase.

Data Migration Minimisation

PatrimoniCloud includes data migration tooling to support the import of existing collection databases. Our migration approach minimises manual data transformation effort through automated field mapping where possible. For the Annex VIII test migration, we migrated the provided databases into our platform. Some manual intervention was required for complex data structures and multimedia attachments.

PROPOSTA DE MODEL DE RELACIO

PatrimoniSaaS proposes a collaborative relationship model with regular governance touchpoints throughout the implementation and operational phases. Our account management team ensures responsive support and clear communication throughout the contract lifecycle.

MILLORA CONTINUA

PatrimoniCloud is continuously improved through regular platform updates incorporating client feedback and market developments. Our product roadmap is informed by client input and industry trends. Update frequency and delivery mechanisms ensure the platform remains current and aligned with evolving museum sector requirements.

CAS D'US SOBRE MIGRACIO DE DADES

PatrimoniSaaS completed the Annex VIII data migration use case. The provided databases were imported into PatrimoniCloud with multi-tenant configuration as required. The shared Material thesaurus configuration across the three specified databases was implemented. A video demonstration of the migration results is provided. Some data integrity limitations were encountered during the migration process and are documented in the accompanying migration report.
